Reasons for Allowance

1. An amendment was received from the applicant on June 28, 2004.
2. Claims 4 and 6 have been canceled.
3. Claims 1-3, 5 and 7-23 are allowed.
4. The following is an examiner's statement of reasons for allowance. The landing stage for an offshore wind power installation as claimed is not shown or suggested in the prior art because of the use of a landing stage that is comprised of a mooring location for ships, a landing area for helicopters, and a common route link from said mooring location and said landing area to said installation, where said mooring location and said landing area are on a common platform, and said landing stage is rotatable about said installation about a vertical axis, or said landing stage is positioned relative to a prevailing wind direction of said installation.
5. The prior art as disclosed by King et al. (US 4,721,412) shows the use of an offshore safety escape platform for an offshore installation, where said platform is comprised of a mooring location for ships, a landing area for helicopters, and a common route link from said mooring location and said landing area to said offshore installation, said mooring location and said landing area being on a common platform. Hendriks (BE 876,855 A) discloses an offshore installation in the form of a wind power generating facility with a foundation that is arranged on a seabed. Ryan (US 4,003,473) discloses an offshore installation with a common route link and an escape platform that should be positioned on the lee side of said installation relative to a prevailing sea current

direction. And newly cited reference by Stair (US 4,180,362) describes the previous use of articulated landing ramps between a platform and a marine vessel, where said ramps are provided on every side of said platform so that transfer operations can be conducted between said platform and said marine vessel on a lee side of said platform in order to reduce the severity of sea and wave action on transfer operations. However, none of the prior art cited shows or suggests the use of a landing stage for an offshore wind power installation that is comprised of a mooring location for ships, a landing area for helicopters, and a common route link from said mooring location and said landing area to said installation, where said mooring location and said landing area are on a common platform, and said landing stage is rotatable about said installation about a vertical axis, or said landing stage is positioned relative to a prevailing wind direction of said installation.

Conclusion

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

7. Any inquiry concerning this communication from the examiner should be directed to Exr. Lars Olson whose telephone number is (703) 308-9807.
